

PPL - ASSIGNMENT 5

חלק 1

1.1.b. הצגה: הפונקציה $\text{append\$}$ מקבלת - cps מבוצעת fact . כמו כן, lst1 , lst2 ו- cont הם continuation , אולי-סיום fact .

cont , מתק"פ: $(\text{append\$ } \text{lst1 } \text{lst2 } \text{cont}) = (\text{cont } (\text{append } \text{lst1 } \text{lst2}))$.

בנוסף: הפונקציה append היא non-strict , cont יכולה להיות cont של fact או cont של append עצמו, נסמך ב- n .

בסיס: $n=0$ - פונקציה

$$\alpha\text{-e}[(\text{append\$ } [] \text{ lst2 } \text{cont})] \Rightarrow * \alpha\text{-e}[(\text{cont } \text{lst2})]$$

$$\alpha\text{-e}[(\text{cont } (\text{append } [] \text{ lst2}))] \Rightarrow * \alpha\text{-e}[(\text{cont } \text{lst2})]$$

פונקציה append - non-strict מתק"פ: cont של fact או cont של append עצמו. כמו כן:

$$(\text{append\$ } \text{lst1 } \text{lst2 } \text{cont}) = (\text{cont } (\text{append } \text{lst1 } \text{lst2}))$$

בסיס: $n=0$ - פונקציה append - non-strict מתק"פ: cont של fact או cont של append עצמו. $n+1$.

$$\alpha\text{-e}[(\text{append\$ } \text{lst1 } \text{lst2 } \text{cont})] \Rightarrow *$$

$$\left. \begin{array}{l} \text{lst1 הוא באורך } n+1, \text{ } \text{cdr lst1} \text{ באורך } n, \\ \text{אז: פונקציה מתק"פ: } \text{cont} \text{ של } \text{fact} \text{ או } \text{cont} \text{ של } \text{append} \text{ עצמו.} \end{array} \right\} \begin{array}{l} \alpha\text{-e}[(\text{append\$ } (\text{cdr } \text{lst1}) \text{ lst2 } \text{cont})] = \\ \alpha\text{-e}[(\text{cont } (\text{append } ((\text{cdr } \text{lst1}) \text{ lst2})))] \Rightarrow * \end{array}$$

$$\alpha\text{-e}[(\text{cont } (\text{cons}(\text{car } \text{lst1}) (\text{append } (\text{cdr } \text{lst1}) \text{ lst2})))]$$

$$\alpha\text{-e}[(\text{cont } (\text{append } \text{lst1 } \text{lst2}))] \Rightarrow *$$

$$\alpha\text{-e}[(\text{cont } (\text{cons}(\text{car } \text{lst1}) (\text{append } (\text{cdr } \text{lst1}) \text{ lst2})))]$$

■

```
(define append$
  (lambda (x y c)
    (if (empty? x)
        (c y)
        (append$ (cdr x) y (lambda (res) (c (cons (car x) res)))))))
```

1. unify[t(s(s), G, s, p, t(K), s), t(s(G), G, s, p, t(K), U)] 3.1

Initialization: $s = \{s\}$

$$A = t(s(s), G, s, p, t(K), s), \quad B = t(s(G), G, s, p, t(K), U).$$

We'll look from left to right and look for a difference between A and B.

The first difference is $s(s)$ and $s(G)$, so:

$$s = s \circ \{G = s\} = \{G = s\}.$$

$$\text{Now} - A = t(s(s), s, s, p, t(K), s), \quad B = t(s(s), s, s, p, t(K), U).$$

We'll look from left to right for the next difference.

The next difference is s and U , so:

$$s = s \circ \{s = U\} = \{s = G\} \circ \{s = U\} = \{s = G, s = U\}.$$

We'll look from left to right for the next difference.

$$\text{Now} - A = t(s(s), s, s, p, t(K), s), \quad B = t(s(s), s, s, p, t(K), s).$$

Now we can see that $A = B$.

The result is: $s = \{s = G, s = U\}$.

2. unify[g(l, M, g, G, U, g, v(M)), g(l, v(U), g, v(M), v(G), g, v(M))] 3.1

Initialization: $s = \{s\}$

$$A = g(l, M, g, G, U, g, v(M)), \quad B = (l, v(U), g, v(M), v(G), g, v(M)).$$

We'll look from left to right and look for a difference between A and B.

The first difference is M and $v(U)$, so:

$$s = s \circ \{M = v(U)\} = \{M = v(U)\}.$$

$$\text{Now} - A = g(l, v(U), g, G, U, g, v(v(U))), \quad B = (l, v(U), g, v(v(U)), v(G), g, v(v(U))).$$

We'll look from left to right for the next difference.

The next difference is G and $v(v(U))$, so:

$$s = s \circ \{G = v(v(U))\} = \{M = v(U), G = v(v(U))\}.$$

We'll look from left to right for the next difference.

$$\text{Now} - A = g(l, v(U), g, v(v(U)), U, g, v(v(U))), \quad B = (l, v(U), g, v(v(U)), v(v(v(U))), g, v(v(v(U)))).$$

We'll look from left to right for the next difference.

The next difference is U and $V(V(V(U)))$, so:

$S = S \cup \{U = V(V(V(U)))\} = \{M = V(U), G = V(V(U)), U = V(V(V(U)))\}$. \rightarrow Failure.

We received a failure because a variable can't include itself and we found that:
 $U = V(V(V(U)))$.

3. $\text{unify}[m(M, N), n(M, N)]$

Initialization: $S = \{\}$

$A = m(M, N)$, $B = n(M, N)$. \rightarrow Failure.

We received a failure because the predicates are different, $m \neq n$.

4. $\text{unify}[p([v | [V | VV]]), p([v | V] | VV)]$

Initialization: $S = \{\}$

$A = p([v | [V | VV]])$, $B = p([v | V] | VV)$.

We'll look from left to right and look for a difference between A and B .

The first difference is v and $[v | V]$, but we can't compare a symbol with a list, so we'll receive a failure.

5. $\text{unify}[g([T]), g(T)]$

Initialization: $S = \{\}$

$A = g([T])$, $B = g(T)$.

We'll look from left to right and look for a difference between A and B .

The first difference is $[T]$ and T , but we can't compare a variable with a list of the same variable, so we'll receive a failure.
